Engineering GmbH

## Project management from A to Z

As your full-service partner, we manage your project in its entirety, optimize your processes and implement the new solution. Alternatively, we offer you support in partial areas.

tomorrow's energy now

## Project management

From the initial idea to project completion, we take comprehensive project responsibility for you – from planning, calculation and realization to project acceptance.

- ♦ Early involvement of customer as co-creator and co-developer
- ♦ Clear definition of performance requirements, project goals and quality criteria
- ♦ Detailed and quality-assured specification as well as tendering of work packages and scope of delivery
- ♦ Continuous monitoring of work progress, resources, deadlines, quality, costs and risks
- ♦ Transparent communication and secure information transfer
- ♦ Consistent rollout and review

## Subproject management

We are happy to take over sub-disciplines of your project management. So that you can entirely focus on your core business and save personal resources.

- ♦ Quality assurance
- ♦ Effective budgeting and cost control
- ♦ Defining and controlling of milestones to ensure on-time completion
- ♦ Effective staff planning and team development
- ♦ Coordination of communication between stakeholders and authorities
- ♦ Risk identification and initiation of appropriate mitigation measures at early stage
- ♦ Optimized procurement of products and services

## Accompanying project support

If you want to manage the project by yourself, we'd be happy to take over smaller tasks and typical back office duties.

- ♦ Engineering: feasibility studies, construction, manufacturing and assembly
- ♦ Administrative tasks: creation and distribution of production documentation, meeting minutes and presentations, archiving
- ♦ Bookkeeping and accounting: cost reporting, auditing and much more

## Outsourcing

MIAG offers you to outsource complex tasks which are crucial for the success of your company, but do not belong to your strategic priorities. This will help you to reduce scalable costs in temporary as well as long-term projects and – more than that – to focus on your core business.
